SUMMARY

Front-end engineer specializing in Vue.js, with 1.5+ years shipping production features for an enterprise government system, spanning real-time dashboards, RBAC, REST/WebSocket integrations, and reporting pipelines used daily by hundreds of end users. Comfortable owning a module end-to-end, remote or in-office.

EXPERIENCE

Web Developer | MSD Digital Intelligence

Jan 2025 – Present

- Built and maintained core modules of a large-scale Vue 3 SPA (665+ views) for a government livestock management system, including animal event tracking (breeding, health, production) and a full CRUD and multi-stage approval workflow.
- Implemented state management across 29 Pinia stores and a custom middleware/guard pipeline for Vue Router (~259 lazy-loaded routes), improving load performance and enforcing role-based access control.
- Designed a centralized data-export toolset (~35 report views) with PDF generation (jsPDF) and multi-sheet Excel export (xlsx), plus a custom 4-step report builder wizard for non-technical users.
- Built a layered API architecture using Axios interceptors, a per-domain service layer, and Pinia stores, handling authentication, validation errors, and session expiry consistently across the app.
- Implemented cross-field form validation (Yup) enforcing real business rules, reducing invalid submissions and improving data integrity.

Executive Trainee | UMW Corporation Sdn. Bhd.

Jun 2024 – Dec 2024

- Coordinated timelines and documentation across 7 concurrent corporate initiatives, keeping all deliverables on schedule and acting as the single point of contact between project teams and management.
- Built internal onboarding/training content in Articulate 360, and prepared reports and materials used directly in management and stakeholder reviews.

Web Developer Intern | Bike Bear

Oct 2023 – Mar 2024

- Shipped responsive frontend features for 5 live client sites (AISM, Isetan Malaysia, Avaland, Swing & Pillows, Vitagen) using HTML, CSS, JavaScript, PHP, and WordPress.
- Hit 90+ Google PageSpeed scores across client sites through image optimization, caching, and lazy loading.

PROJECTS

Developer Portfolio: [Live Demo](#) | [Github](#)

- Interactive Vue.js platform with a custom state-driven skill visualization system, canvas rendering, and animated transitions; optimized for lazy loading and deployed production-ready.

Tvflix (flixer): [Live Demo](#) | [Github](#)

- Built search/filter/recommendation flows on external movie APIs, with YouTube embed playback and full loading/empty/error state handling.

Skysavvy: [Live Demo](#) | [Github](#)

- Responsive dashboard on the OpenWeather API with live location-based forecasts and dynamic UI updates.

SKILLS

Frontend: Vue.js, React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, SCSS

State & Backend Integration: Pinia, REST APIs, WebSockets, RBAC

Tools: Vite, Git, CI/CD (GitHub Actions), Docker, Vercel, Postman, jsPDF, XLSX

Languages: JavaScript, TypeScript, Python, Java, C++, SQL

EDUCATION

Bachelor of Computer Science (Artificial Intelligence), Hons., Universiti Teknikal Malaysia Melaka (UTeM), Mar 2024

- Final Year Project: Weather Forecasting System using Machine Learning

CERTIFICATIONS

- Fundamental Power BI Desktop (2026), TED Learning Sdn Bhd
- Frontend Web Development Masterclass with React and Material UI, HRD Corp
- Create an Eye-Catching Website, WordPress Site Administration, HRD Corp
